

CVWO Final Submission

I have to say that this assignment was really tough for me, trying to learn React and Rails with Source as the only language I have learnt thus far. I think I have definitely struggled more than I learned, from command line usage to database framework and frontend design – the challenges are endless. Results wise, I could have done better, given that I did not succeed in deploying a functioning task manager app (I spent more than half a day debugging the ‘edit’ button in vain). Nonetheless, I am still glad to have been able to learn some basic and valuable skills through this assignment!

User Manual

Home page:

- Click on the “View Tasks” button to proceed to the task lists.

Index page:

- Click  on to add new tasks.
- Click  on to check and delete completed tasks.
- Click  on to delete existing tasks.
- Click  on to edit tasks. (Unfortunately, it does not work after refreshing)

* Tasks will be sorted by their tags
